Job Number: 20-402

Preamble:

HARDWARE GENERAL NOTES:

1. After final approval, this schedule is to be used as a guide for shipping, delivery, installation and construction use. Therefore, it is the responsibility of all parties to make sure all items are scheduled accurately.
2. Corrections should be made by lining out incorrect items with contrasting colored pen in order to accentuate changes.
3. Materials on this project will not be ordered until final approval has been received. Any item added or changed from that specified will be an extra to the contract, and will not be ordered until a written order has been received. We can not be responsible for any delays or changes incurred because of insufficient time for delivery caused by approval or change order requests.
4. Materials specified and approved on this schedule have been special ordered for this project. Any item changed or cancelled will be at the purchaser's expense and no credit will be allowed without written approval.
5. Availability of materials is subject to the manufacturers' ability to produce and ship these to us. Normal lead times may vary from as little as two weeks to as much as 12 - 16 weeks, depending on the type of materials involved, manufacturer's back-log of orders, and other factors, none of which we can control. All lead times are from the manufacturer's receipt of a purchase order. We know from experience, what is reasonable to expect from a manufacturer for a given type of product. We will exercise every reasonable means to expedite delivery of products for your job. In NO case, however, will our firm be responsible for any manufacturer's inability to produce and deliver product on a specific date.
6. All installation and maintenance instruction, and all tools and wrenches packed with hardware items shall be identified and given to owner.

11/9/2020 1:09

Job Number: 20-402

7. Closers used on this project meet or exceed handicap accessibility requirements if properly adjusted at time of installation as follows:
 - a. Maximum force to open door shall be 8.5 lbs for exterior door and 5 lbs on interior door. A momentary auxiliary force exceeding the maximum is approved in order to overcome the inertia of the door.
 - b. Through the long closing arc, a uniform reasonable (main) speed should be maintained. The latching arc allows the door to close quietly and firmly.
8. All closers shall be installed on the push side of the door unless otherwise listed:
 - a. If item description or product number is prefixed with "P" or "PA", mount on push side of door using a soffit bracket.
 - b. Unless otherwise noted on schedule, install all closers for 180 degree opening.
9. Closers used on this project are fully adjustable type, usually sizes 1 thru 6. In addition to "Spring Power", these closers must be adjusted for latch speed, sweep speed and back check at time of installation in accordance with manufacturer's instruction for size and weight of door and handicap accessibility requirements. Selector Valves: Valves are factory preset for regular arm installation. When parallel arm is required, adjustment must be made in field. Cush arms, closers/stop or closer holders are designed for the adjustable back check to provide a buffering effect before the arm comes to a dead stop against a built-in lug on the soffit bracket. **IT IS IMPERATIVE THAT THE BACK CHECK BE PROPERLY ADJUSTED ON ALL CLOSERS TO PREVENT DAMAGE TO THE DOOR, FRAME OR HARDWARE.**
10. Any exceptions to the job specifications or any special instructions are listed as "Hardware Set Notes" following item listings.
